

A B S T R A C T

The composition includes a chlorinated polyolefin grafted by an amino-silane to enable it to be cured in air. The composition contains a basic mixture including, for 100 parts by weight of said chlorinated polyolefin, 100 to 250 parts of a filler containing moisture and an agent for treating said filler, and said amino-silane is grafted to said chlorinated polyolefin of said basic mixture during extrusion of the composition. The composition is useful in insulating and sheathing cables.
